

Behzad Azadi

Address: Iran/Tehran
Phone: +98 903 262 7632
E-mail: behzad.azadi2693@gmail.com
Github: <https://github.com/azadi-behzad>

Professional Summary

Results-driven Software Engineer with extensive experience in designing, developing, and implementing innovative software solutions. Proficient in modern technologies and software engineering methodologies, excelling in problem-solving and performance optimization. Strong collaboration skills enhance team productivity, ensuring high-quality deliverables. Passionate about staying updated with industry trends and continuously improving skills to contribute to impactful projects and drive technological advancements

Work Experience

SQA - octa company - tehran(02/2026 - 03/2026)

Performed system verification and validation (V&V) for embedded systems to ensure compliance with functional and quality requirements.

Designed and executed test scenarios, test cases, test data, and maintained comprehensive test documentation.

Analyzed operational logs to identify system anomalies, performance bottlenecks, and potential risks, providing actionable recommendations for system improvement.

Investigated software defects through log analysis and root cause analysis (RCA), collaborating with development teams to validate fixes.

Conducted testing and reporting in operational environments, monitoring system behavior and verifying production readiness.

Improved software quality through static code analysis and continuous testing using industry-standard quality assurance tools.

Technologies & Tools:

Embedded Systems Testing - Pytest - GitLab - SonarQube - Pylint - Grafana - Loki - Test

Documentation - Test Reporting - Log Analysis - Risk Assessment - Root Cause Analysis (RCA)

• Software Engineer & DevOps Engineer - maxonir company - tehran(05/2025 - 12/2025)

Designed, developed, and deployed microservices-based applications using Python, Django, and FastAPI.

Designed scalable software architecture and participated in system design for distributed services.

Built and maintained containerized environments using Docker, docker compose

Implemented asynchronous task processing and messaging solutions using Celery, Celery Beat, RabbitMQ, and Robot Framework AsyncIO.

Designed and managed database infrastructure with PostgreSQL, MongoDB, and Redis.

Implemented Role-Based Access Control (RBAC) and matrix-based access control mechanisms to secure enterprise applications.

Applied Domain-Driven Design (DDD) and Test-Driven Development (TDD) principles throughout the software development lifecycle.

Configured monitoring and observability dashboards using Grafana to monitor system health and

performance.

Collaborated with cross-functional teams to deliver reliable, scalable, and maintainable backend services.

Technologies & Tools:

Python - Django - FastAPI - PostgreSQL - MongoDB - Redis - Celery - Celery Beat - RabbitMQ - Robot Framework AsyncIO - Docker - Grafana - RBAC - Matrix Access Control - TDD - DDD - System Design - Software Architecture

• **Systems Deployment & Operations Engineer - arena company - remote(04/2025 - 03/2026)**

Evaluated, tested, configured, and deployed enterprise platforms across development, testing, and production environments.

Prepared technical documentation, including installation procedures, deployment guides, and platform requirements.

Integrated and configured third-party platforms to ensure compatibility with existing enterprise systems.

Conducted technical research and evaluation of open-source and enterprise platforms, providing reports and implementation recommendations.

Performed system troubleshooting, root cause analysis (RCA), and issue resolution to improve platform stability and reliability.

Supported deployment, configuration, and operational readiness of software platforms throughout their lifecycle.

Collaborated with cross-functional teams to validate platform requirements and ensure successful production deployments

• **DevOps engineer - fanap company - seasonal(12/2024 - 04/2025)**

Deployed and managed enterprise open-source platforms using Docker to support organizational infrastructure and business services.

Designed and implemented a unified self-hosted platform to centralize enterprise applications and improve operational efficiency.

Configured and maintained reverse proxies and web servers using Nginx and Apache.

Implemented Single Sign-On (SSO) solutions using Keycloak, enabling centralized authentication and identity management across multiple services.

Prepared technical documentation, deployment guides, and configuration manuals to streamline installation and maintenance processes.

Installed, configured, and maintained open-source solutions while ensuring system reliability, scalability, and security.

Collaborated with infrastructure and development teams to integrate and optimize enterprise platforms.

Technologies & Tools:

Docker - Keycloak - SSO - Nginx - Apache - Open-Source Platforms - System Configuration

• **Technical Team Lead - Ertebat Afarinan Bi Enteha - remote(11/2023 - 02/2024)**

Led a remote software engineering team, overseeing task planning, execution, and delivery of startup projects.

Provided technical consulting on software architecture, system design, and technology selection for new products.

Coordinated development activities, monitored project progress, and ensured timely delivery of technical milestones.

Conducted code reviews and promoted software development best practices to improve code quality and maintainability.

Facilitated Agile/Scrum ceremonies and collaborated with cross-functional teams to streamline development workflows.

Supported the development team in technical problem-solving, architecture decisions, and implementation strategies.

Maintained and managed Linux-based development environments and Dockerized applications.

Technologies & Methodologies:

System Design - Software Architecture - Agile - Scrum - Code Review - Linux - Docker - Technical Leadership - Project Coordination

• **Senior Software Engineer - Rahbaran Rayan Fan Aco - tehran(03/2024 - 12/2024)**

Led the design, development, and implementation of an enterprise Customer Relationship Management (CRM) system.

Designed scalable backend services and software architecture using Python and Django.

Provided technical consulting and architectural guidance throughout the project lifecycle.

Collaborated directly with stakeholders and clients to gather requirements, define technical solutions, and ensure successful project delivery.

Implemented secure authentication and authorization using Keycloak and Single Sign-On (SSO).

Developed asynchronous and event-driven components using Celery, RabbitMQ, and Redis.

Integrated object storage solutions with MinIO and automated CI/CD pipelines using GitLab CI.

Participated in system design, architecture reviews, and technical decision-making to improve scalability and maintainability.

Technologies & Tools:

Python - Django - Redis - Celery - RabbitMQ - Keycloak - SSO - MinIO - GitLab CI - System Design - Software Architecture - Enterprise CRM

• **Senior Technical Specialist - lavisan company (isc) - tehran(08/2022 - 11/2023)**

Developed and maintained backend services using Python and Django for enterprise geospatial applications.

Designed and implemented algorithms for Natural Language Processing (NLP) and geospatial data processing.

Developed and optimized GIS-based solutions using GeoDjango, PostGIS, and QGIS.

Built and maintained search and indexing services using Elasticsearch and Haystack to improve data retrieval performance.

Designed and optimized data models and application architecture following CQRS principles where applicable.

Managed, deployed, and maintained production services using Docker and WSGI.

Participated in system design, performance optimization, and technical decision-making to improve scalability and maintainability.

Technologies & Tools:

Python - Django - NLP - Entity Recognition - Algorithm Design - GeoDjango - PostGIS - QGIS - Elasticsearch - Haystack - Docker - CQRS - WSGI - System Design

• **Freelance Backend Developer - Self-Employed - (01/2020 - 04/2022)**

Designed and developed custom web applications and backend systems for clients across multiple industries.

Built websites and web applications for engineering service organizations and poultry farm monitoring and management systems.

Developed search engines for text, image, and compressed file indexing and retrieval.

Designed and implemented scalable backend services using Python and Django.

Deployed and maintained web applications in Linux-based production environments.

Collaborated directly with clients to gather requirements, propose technical solutions, and deliver project-based software.

Technologies & Tools:

Python - Django - REST APIs - PostgreSQL - Linux - Docker - Search Engine Development - Web Application Development - System Design

Education

Farhang & honar Iran/sananndaj Associate information technology	09/2016 - 06/2018
Meli maharat Iran/sananndaj Bachelor software engineer technology	09/2018 - 06/2020

Languages

Persian	— Native
Kurdish	— Native
English	— C2

Additional Skills

- softskill: Analytical Thinking - Problem Solving - Self-Learning - Patience - Continuous Learning
- Backen: Python, Django, Fastapi, Rest API, DRF, gRPC, Elasticsearch, Geodjango, GIS, Rabbitmq, Celery, Haystack, Minio
- DB: PostgreSQL, MongoDB, Redis, Postgis
- DevOps: Linux, Bash, Nginx, Docker, Kubernetes (k3s), Helm, ELK, Grafana, Loki, Gitlab-ci - Git
- QA: ISTQB, Pytest, Playwright, Sonarqube
- Architecture: Microservices, SOA, DDD, TDD, Agile, Scrum, System Design
- AI skills: ML/NLP (basic) - prompt engineer - AI engineering - agent application
